

Engineering Coding Guidelines & Best Practices

Python Standards: We adhere strictly to PEP 8 standards. All code must be formatted using Black and checked with Flake8 before merging.

Documentation: All public classes and functions must include descriptive docstrings detailing parameters and return types.

Testing: Minimum unit test coverage is 80%. Pull requests will fail CI/CD checks if coverage drops below this threshold.

Pull Requests: Code reviews require approval from at least two senior team members before a merge into the main branch can occur.
